

Canon Etch Laguna

With our innovative micro ETCH technique, we are able to produce the desired design with a semi-transparent or smooth satin finish. The glass surface itself is resistant to external influences and provides a long-term solution. Our collections offer countless pattern variations when combined with the other techniques and technologies we use. In combination with the mirror pattern, the result is a beautiful decorative glass that allows light to pass through it while maintaining privacy.

max. dimensions:	3000 x 1500 mm
