In the beginning...

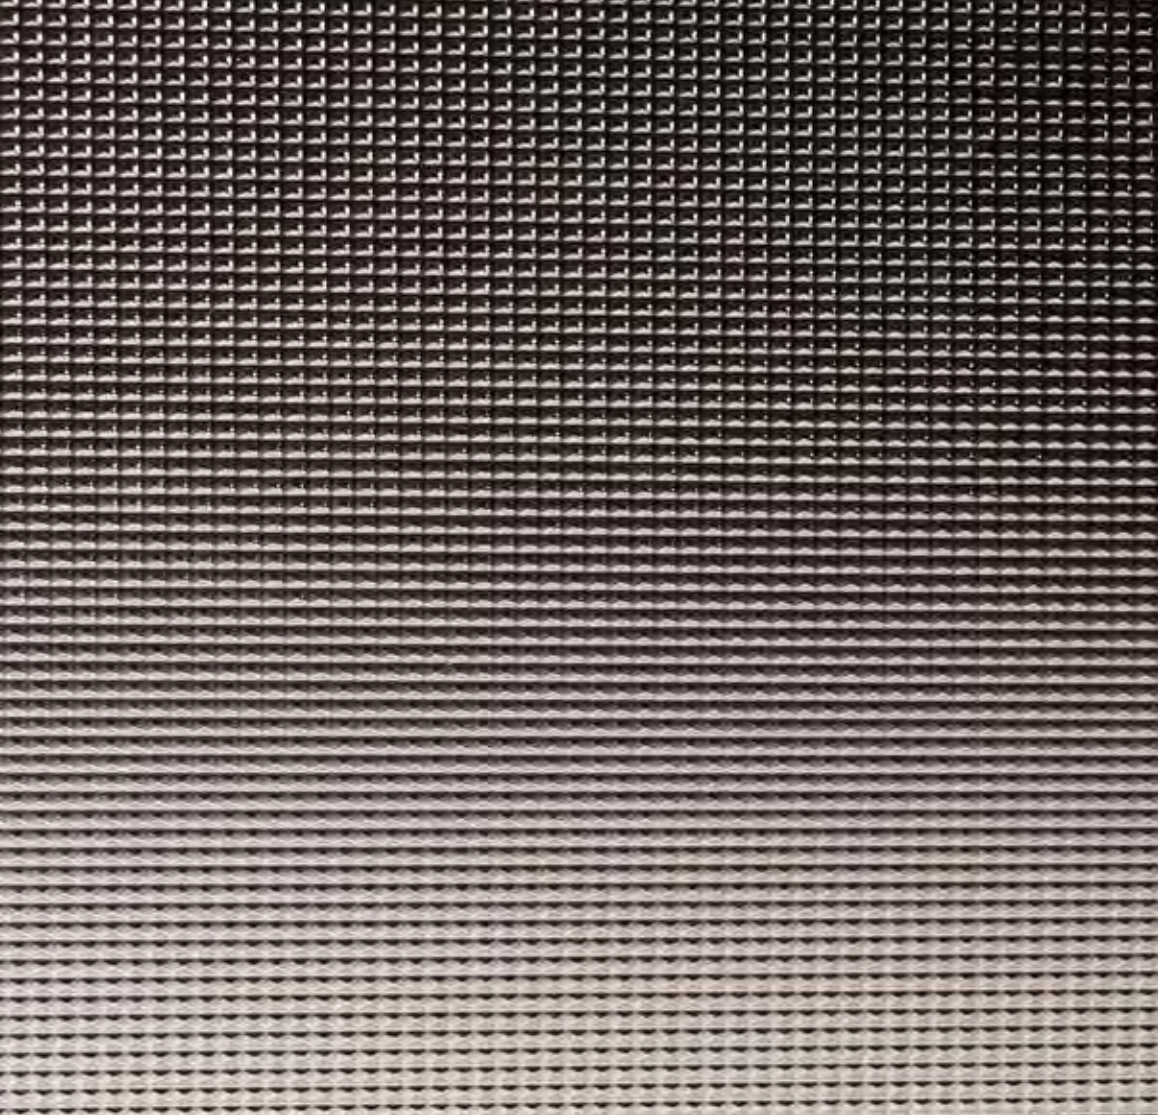

We were a small family company guided by a tradition of knowledge passed down through three generations. Bokart Glass was founded in 2003 by brothers Kvesić with a clear vision – to bring artistic expression and innovation into architectural spaces through glass. From the start, the studio has combined creativity, craftsmanship, and technology to push the boundaries of what glass can become.

VISION
TECHNOLOGY
DESIGN

Specializing in decorative and architectural art glass, we create unique solutions tailored to each project. With experienced project management, trusted professional partners, and a state-of-the-art production facility, we are equipped to respond to even the most complex design challenges.

Our growth has been shaped by collaboration with architects and artists on demanding projects around the world. We are driven by curiosity, experimentation, and a constant search for new techniques, materials, forms, and textures.

Today, Bokart Studio is recognized as a regional leader in artistic glass for architecture – known for innovation, flexibility, and a deep commitment to quality in every detail.

We invite you to immerse yourself in our glass collections and discover inspiration and solutions for your creations.

TEXTURE
GLASS

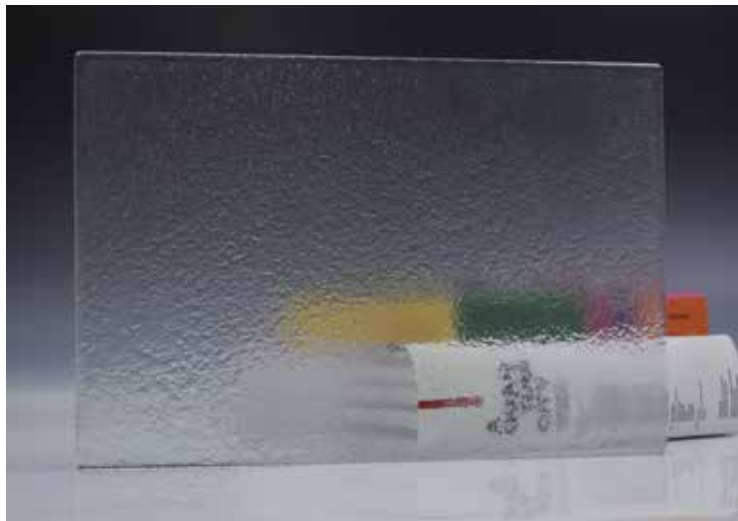

Inspiration from nature

Texture glass is created in a furnace at high temperatures, where, during firing, it takes the shape of a mould. The Organic series, with eight different textures, is inspired by nature, while the Intaglio series features precise geometric shapes. The glass can be transparent or it can be treated with a metal coating to obtain an opaque surface. The Metallic series offers embossed glass in fifteen different colours and metal shades. These are characterised by refined tones and a luxurious surface appearance. Among our texture glass options, you will find solutions for various applications in both private and commercial spaces.

REMARK - Due to the manual and unique method of production, certain differences from the shown sample are possible.

ETCH GLASS

Enduring delicacy

With our innovative micro ETCH technique, we are able to produce the desired design with a semi-transparent or smooth satin finish. The glass surface itself is resistant to external influences and provides a long-term solution. Our collections offer countless pattern variations when combined with the other techniques and technologies we use. In combination with mirror patterning, the result is beautiful decorative glass that allows light to pass through while maintaining privacy.

shower cabins, facades, partitions

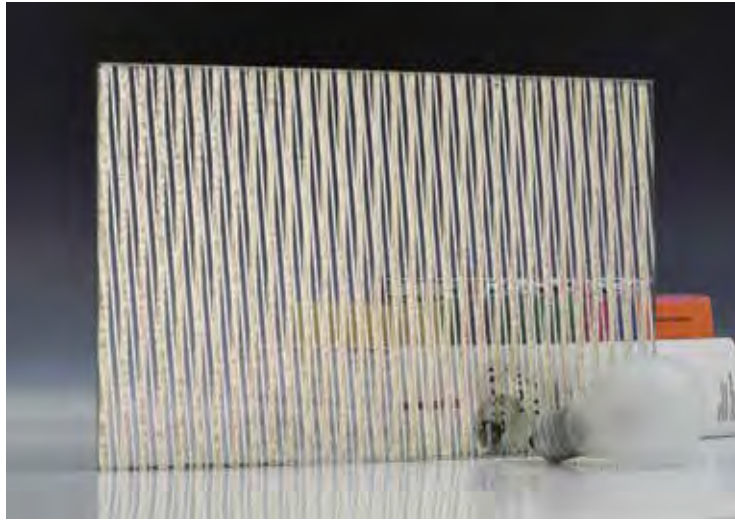

PATTERN
MIRROR

Design and reflection

The pattern mirror collection offers countless different patterns on single glass or laminated glass. Applying mirrors to both sides of the glass creates depth, dynamics, and shadow within the glass panels. As we are in control of all stages of the production process, we can adapt each of our techniques to fully suit the needs of your project. This applies, for example, to silvering (mirrors), painting, or the use of different types of glass; ultimately, the decision is up to you. A patterned mirror is an excellent solution for interiors, as wall panels or room partitions, because it reflects light, provides privacy, and creates a feeling of luxury in the space.

ANTIQUE
MIRROR

Elegant nostalgia

Our decorative antique mirrors are made by hand by applying metal to the surface of the glass in larger or smaller quantities. The models differ in the intensity and appearance of the antique effect, bringing the desired style to your space. This unique collection will fit perfectly into interiors, for example hotel lobbies or rooms, bars, or as a statement piece in any interior. Each mirror can be tempered or laminated, meeting all safety and other limiting conditions required by the project.

Glass panels are made by our artists, so each one is slightly different and unique.

METAL
MESH

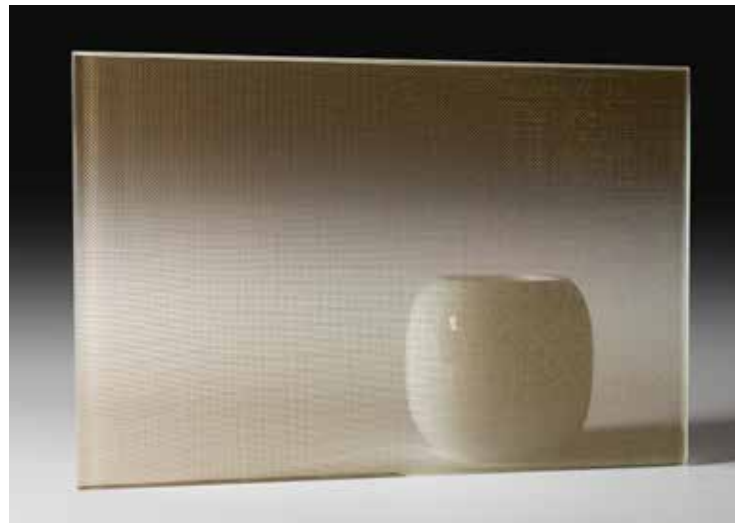

—

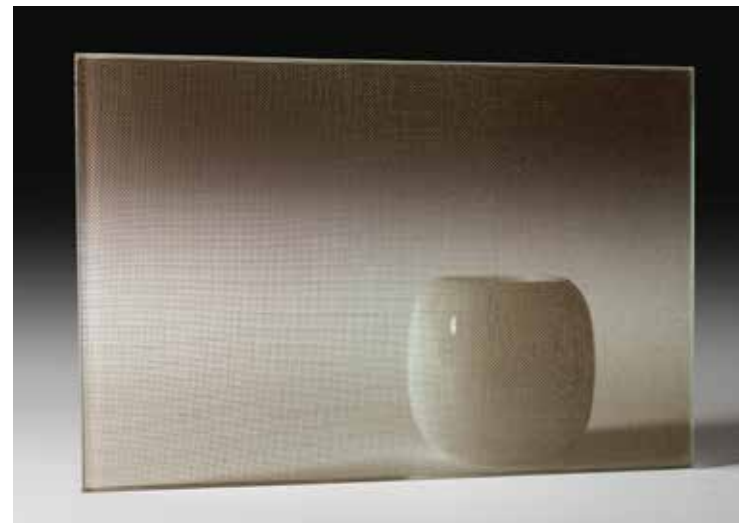

Aesthetics and technology

Metal meshes laminated between two glass panels bring texture, depth, and subtle transparency to interiors. They are ideal for partitions, railings, and other decorative elements, providing visual impact while enhancing technical performance. Their versatility allows architects and designers to play with light, shadow, and patterns while maintaining structural strength and elegance.

METAL MESH

FABRIC
LAMINATE

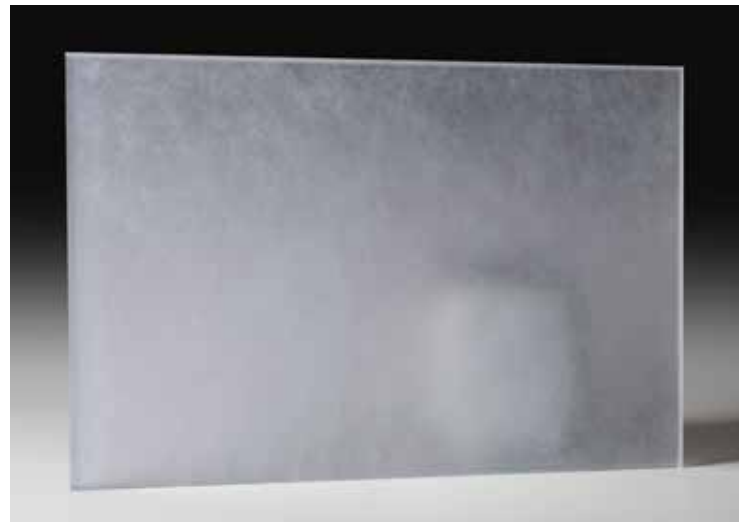

Capturing the Beauty of Fabric

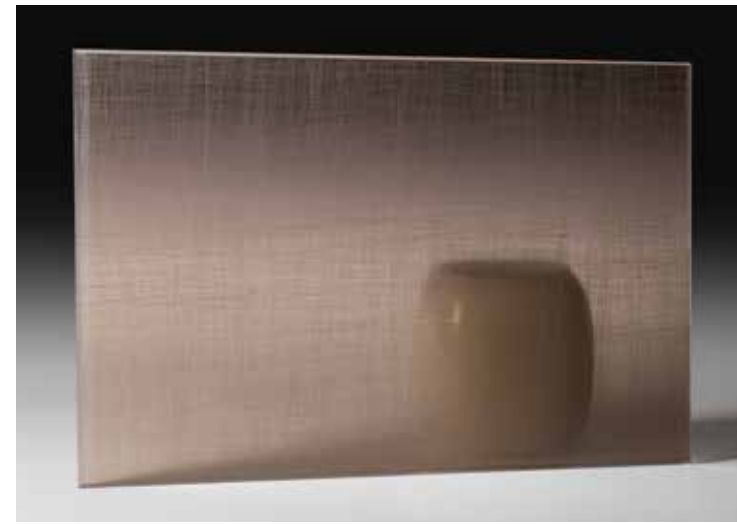

Fabric laminated glass encapsulates fabric between two or more sheets of glass, preserving the organic texture of fibers with refined transparency. It combines the structural strength and safety of glass with the delicate beauty of woven fabrics. These laminates are an ideal solution for diffusing light and creating a distinctive ambiance in interior spaces.

STONE

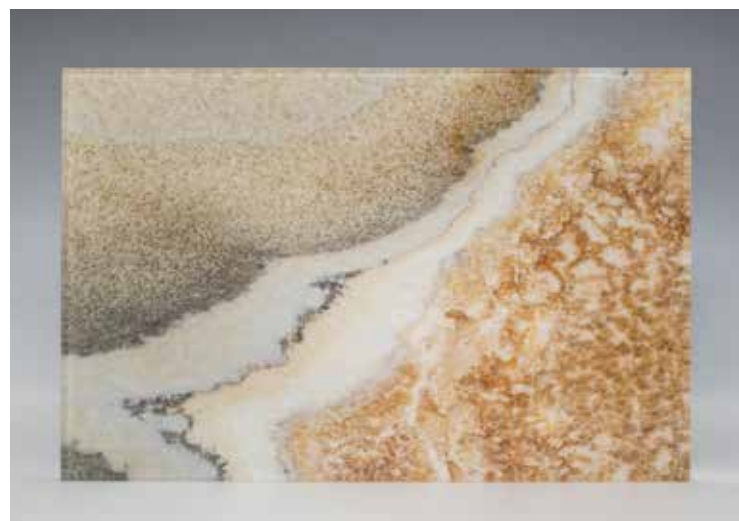

Stone on glass

We create a magnificent stone effect by digitally printing a natural stone texture, marble, or onyx pattern in high resolution. Our stone samples are high-resolution scans of real minerals, manipulated so that there is no pattern repetition on the glass surface. These are simple and economical solutions for all interiors, especially where the price of real stone is not acceptable. They are perfect for large public and private spaces. Backlighting gives this kind of glass a nice transparency and luxurious feel, especially where natural or reflected light cannot penetrate, for example in hotel receptions, bars, restaurants, and other hospitality venues.

COLOURED GLASS
AND MIRRORS

Sophisticated simplicity

"Less is more." Once again, the legendary saying of the modernist architect Ludwig Mies van der Rohe proved to be true. We have explored the possibilities offered by standard transparent and coloured glass in combination with different metal coatings. The result is a palette of mirrors in subtle, elegant tones that can find a variety of applications in architectural exteriors and interiors. Inspired by the echoes of the forest, the infinity of the sky, and the depth of the sea, we created a palette of cool green, blue, and grey shades. Warm brown tones remind us of our connection with our one and only Earth, while accents of gold and black bring surprise and mystery.

Light and color

In our Color Transparent Glass, Color Laminated Satinato, and Color Laminated Mirrors collections, you can find over 300 different colours and shades. This broad selection allows you to choose hues that will perfectly complement the desired interior design for your project. These materials are known for their durability and UV resistance, making them ideal for use in public spaces such as offices, schools, or kindergartens, where the right colour choice can greatly influence the atmosphere of the space.

DICHROIC
GLASS

—

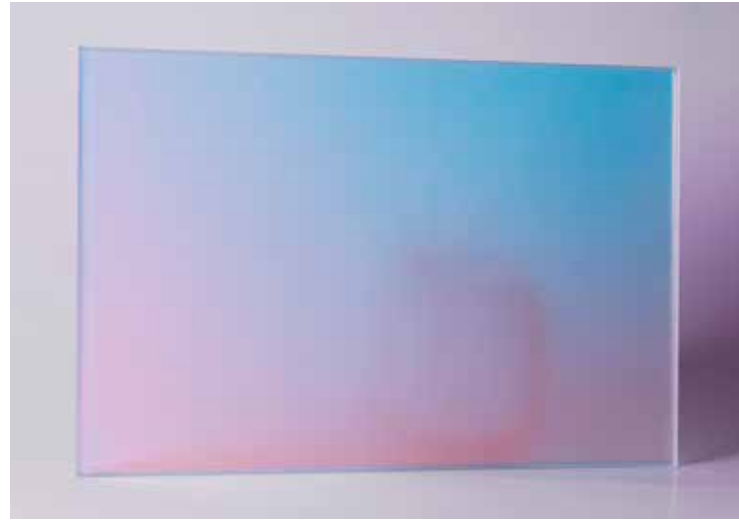

Play of Light and Color

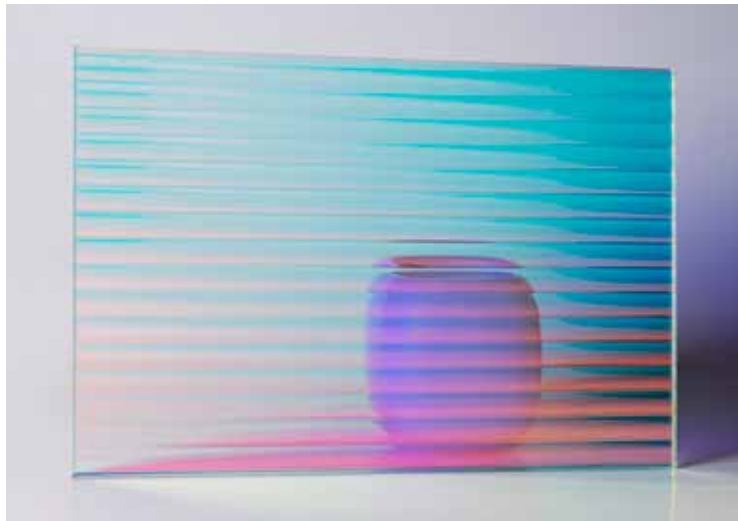

Dichroic glass is unique due to its ability to create a fascinating colour-shifting effect, which changes based on the viewing angle and the amount of light passing through it. This glass allows certain wavelengths of light to pass through while reflecting others, generating rich colour changes depending on the source and intensity of the light. Dichroic glass creates mesmerising visual effects, transforming colour and reflection under different lighting conditions. It is widely used in architecture, interior design, and artistic installations to achieve a dynamic and visually appealing effect.

SMART
GLASS

—

High-Tech Solutions for Your Privacy

Smart glass is a technologically advanced glass system for both indoor and outdoor use. This revolutionary technology enables a number of new functional and aesthetic solutions. Thanks to the creative use of PDLC (Polymer Dispersed Liquid Crystal) film properties, smart glass can instantly change from opaque to transparent. Specifically, the liquid crystals within the film align into a regular grid under voltage (ON state), allowing transparency. When the electrical voltage ceases (OFF state), the liquid crystals disperse irregularly, making the film opaque. Smart glass retains its properties of sound insulation, mechanical resistance, and resistance to high temperatures and water.

Smart glass is increasingly used in areas such as:

- spa and wellness centers
- healthcare facilities
- private residences
- residential and commercial buildings

TRANSPARENT GLASS/ON state - liquid crystals in proper alignment.

OPAQUE GLASS/OFF state - randomly dispersed liquid crystals.

PRIVACY WITH ONE CLICK

Smart glass can be controlled via remote control or dimmer. A single click is enough to transform the space and achieve the desired level of privacy.

Dynamic Design

Any type of pattern or motif can be applied to smart glass. In the ON state, the design is subtle, while in the OFF, opaque state, the glass ensures privacy and the motif stands out against the background. Whether simulating the texture of materials like stone, geometric patterns, or illustrations, the suitable motif enhances the ambience of your space.

APPLICATION - Windows, glass doors, shower cabins, and partitions can all be made from smart glass.

MAINTENANCE - Smart glass is easy to maintain and can be cleaned with a damp cloth and simple glass cleaner.

LIFESPAN - Smart glass products can remain in the ON state for 100,000 hours, which means they typically last 15 to 20 years.

ENERGY EFFICIENCY - Smart glass is highly energy-efficient, consuming less than 5 W/m².

ARCHITECTURAL
GLASS

Industrial Aesthetics

Various types of industrially manufactured glass hold an important place in modern architecture. Along with excellent aesthetic and functional characteristics, one of their major advantages is affordability. We offer several types of industrial glass with different textures, known as ornamental glass. Due to its surface, ornamental glass diffuses light and adds decorative value, making it perfect for partitions and interior design elements. In exterior applications, ornamental glass enhances buildings aesthetically and provides privacy in various architectural contexts.

OMBRE
GLASS

—

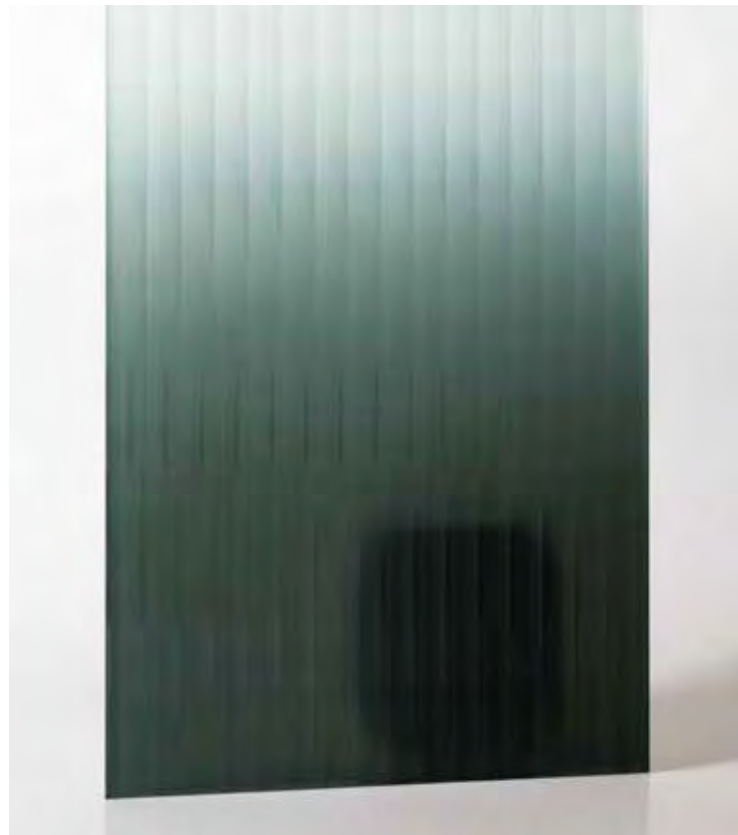

Soft Transitions

Ombre glass is a subtle yet striking decorative solution for various types of glass surfaces in interior spaces. With a smooth gradient transition from deep dark tones to lighter shades, it creates a unique visual effect that brings sophistication to any space.

Ombre glass introduces gentle tonal shifts — soft neutrals or bold colours — making it ideal for contemporary interiors. It creates atmosphere and visually defines spaces through the play of light. Ombre glass can be custom-made to suit the specific needs of a project and design concept.

BESPOKE
PROJECTS

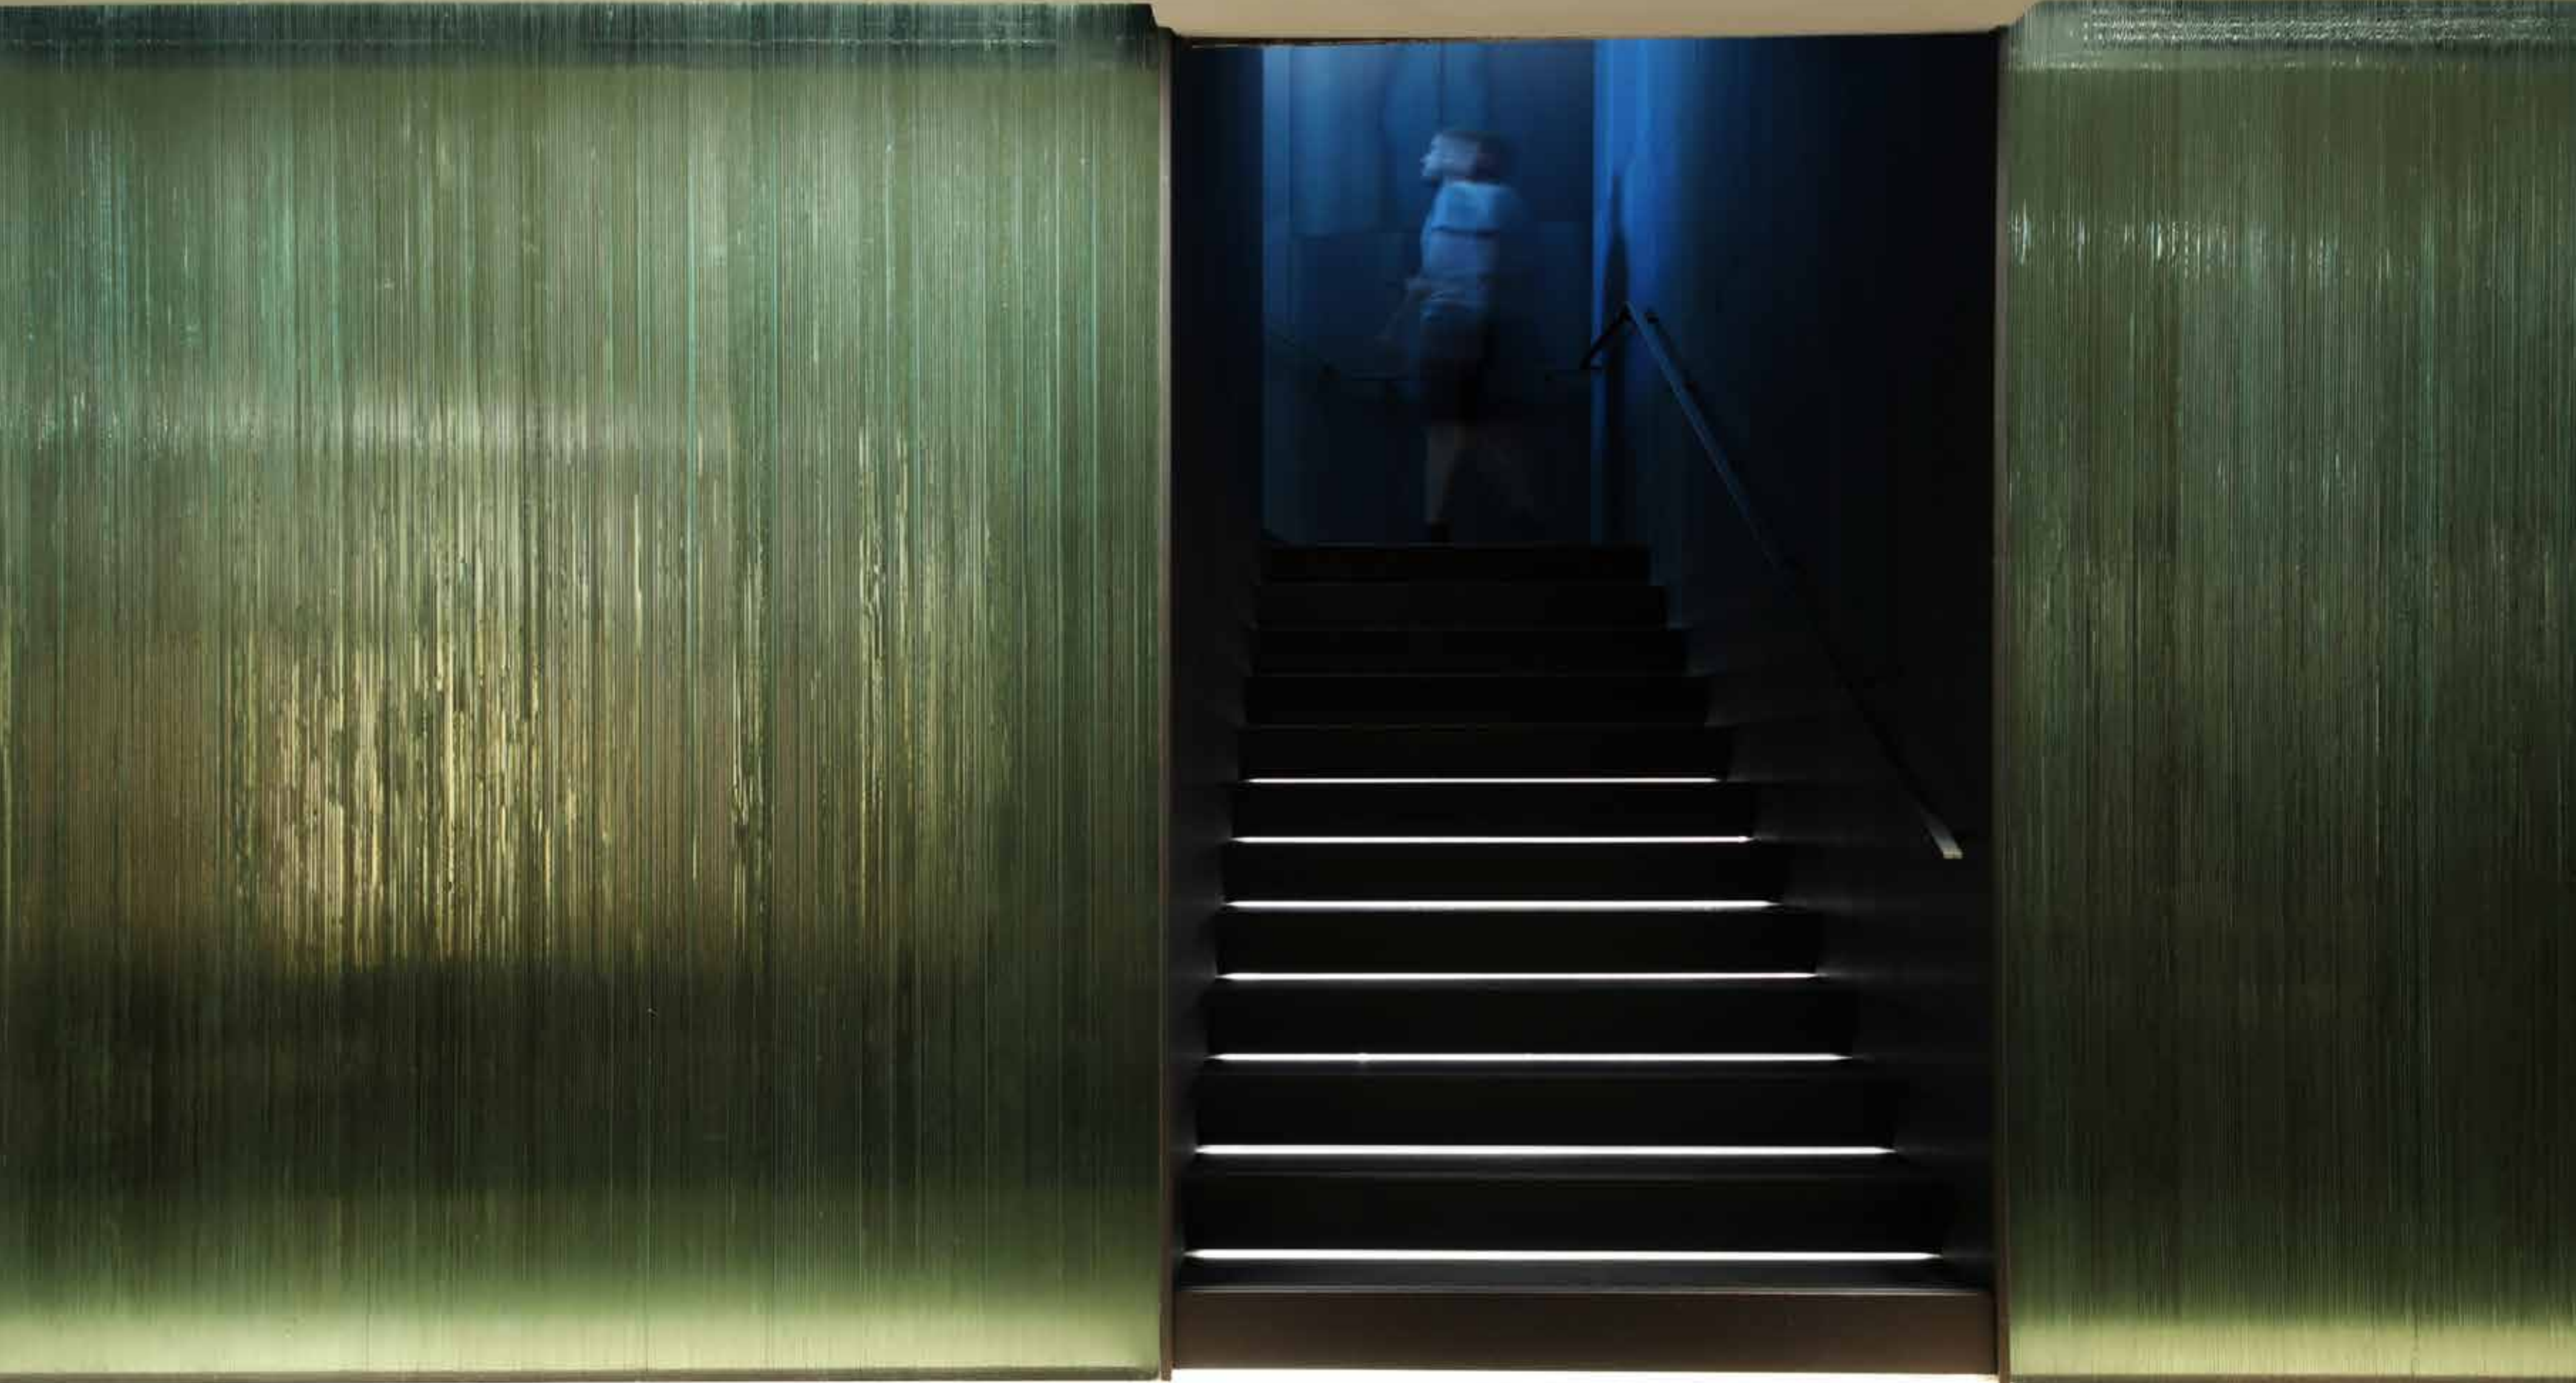

Private residence, textile laminate and partial mirror

Bespoke Design

In addition to the decorative glass collections included in our regular range, we also present special projects developed in collaboration with world-renowned architects, designers, and artists.

Thanks to the wide range of glass-processing technologies at our disposal, we are able to identify the optimal technical solution that enables the realization of a design or artistic vision. Equally important are our people — our team consists of artists, designers, technologists, project managers, and skilled craftsmen who develop each project from concept through to installation. Close collaboration with clients, high-quality workmanship, and a strong attention to detail define our approach to these demanding projects. We are proud to look back on some of the most attractive and truly bespoke projects we have delivered.

Grand Park Hotel Rovinj, monolithic glass, authors: Piero Lissoni and 3LHD

Wellness Vitality Hotel Punta, custom-made textured glass, transparent colored finish, authors: Andrija Rusan, Oris Architecture, and Dean Skira

Silvia Vujčić Pavilion, digital print on mirror, authors: Silvio Vujčić and Ana Lisonek

Monument to the Homeland, glass bricks, authors: Nenad Fabijanić and Jeronim Tišljar
